

Music Player with Audio Augmentations

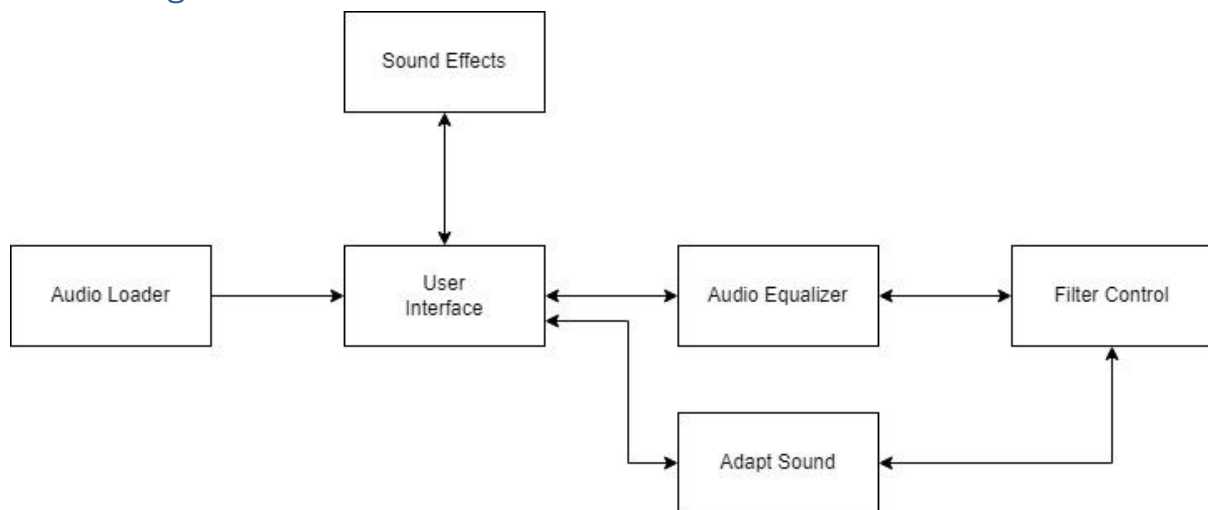

Introduction

Music Player with Audio Augmentation aims at providing a Music Player with an equalizer that contains various presets improving your overall listening experience. It also consists of various other Sound Effects that are currently trending in the music industry. It also contains a feature called Adapt Sound which works by mapping the sound capacities of the sound playing device (Speaker, Headphones etc.) and the listener to create specific Sound Profiles for each device and listener to optimize power and sound quality.

Objectives

- Provide a Simple Interface
- Audio Equalizer and Adapt Sound to improve listening experience
- Provide Sound Effects trending in the music industry
